

ACCLIMATION- "DROP & PLOP METHOD"

STEP 1:

Float the bag of new arrivals for 15 to 20 minutes to get the temperatures to match. The water in the bag will slowly equalize in temperature and match the water temperature in your tank.

STEP 2:

Prepare a bucket or container and grab a net.

STEP 3:

After 15 to 20 minutes, open the bag. You will have to position the net over the bucket or container, and pour everything into the net to catch the fish. The water from the bag will run down into the bucket/container.

STEP 4:

Release fish directly from the net into their new home.

STEP 5:

Turn off the lights. This allows the new additions to peacefully explore their new home while they acclimate and destress.
